BEAUTY & PROTECTION

Mosquito: The World Deadliest Animal

Despite their tiny size, mosquitoes are the deadliest predators in human history – surviving for centuries and spreading life-threatening vector-borne diseases such as Malaria, Dengue and Zika.

Insect Repellent

IR3535® repellent is a nature-inspired molecule with the INCI EthylButylacetylaminopropionate. Produced in EU, this active molecule is suitable for use across the globe, including tropical areas. It is used and trusted worldwide over 40 years and is the preferred choice for effective and invisible insect repellents against mosquitoes (e.g. *Aedes*, *anopheles*, *culex*), ticks, head lice.

- **Proven Efficacy**
IR3535® based products have proven efficacy up to 8h to 12h. Many different efficacy tests were conducted to attest IR3535® has comparable efficacy to DEET and Icaridin.
- **Extraordinary Tox Profile**
IR3535® repellent is recommended for daily use for the entire family, including babies, toddlers, elderly and even pregnant women. It is the best option for people with sensitive skin.
- **Environmental Friendly**
IR3535® repellent is biodegradable and not persistent in the environment. It does not kill insects or harm aquatic organisms.

Ready-To-Go Solutions

We can support your company to get to market faster:

- Save time in formulations and efficacy tests with our stable and high-efficacy formulas.
- Accelerate access to different markets with stringent regulations.
